

DIRIGIBLE - BASICS - USER INTERFACE

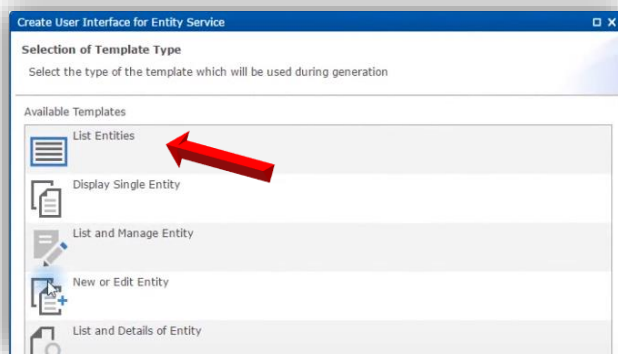

- 1) In the Workspace Explorer expand the *ScriptingServices* folder and your project folder after that. Right-click your *entity*.

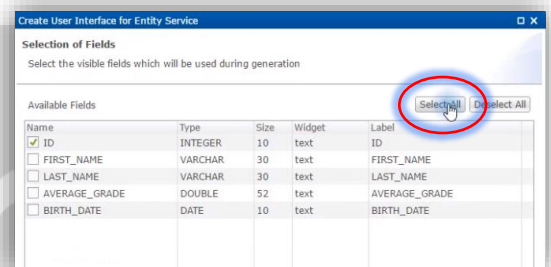

- 2) Generate the UI (User Interface for Entity Service) of your entity service by choosing *Generate* from the dropdown menu and clicking on *UI*.

3) Select the *List Entities* template.

4) Select all currently available fields by clicking *Select All*.

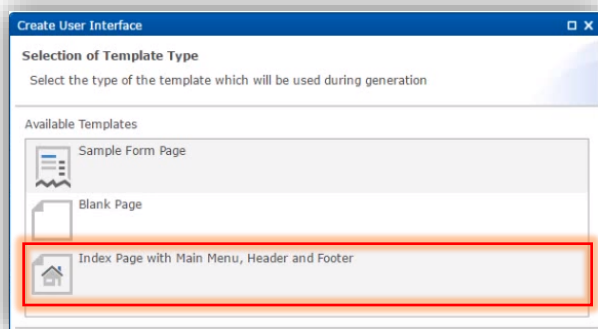

Afterwards:

Next -> Type name of your file -> Next -> Type your Page Title -> Finish

5) Until now you have generated a web page showing a list of students. Now, you will learn how to make an index page.

6) Right-click on *WebContent* from the Workspace Explorer. Create your new user interface by clicking *New->User Interface*.

7) Select the *Index Page* option.

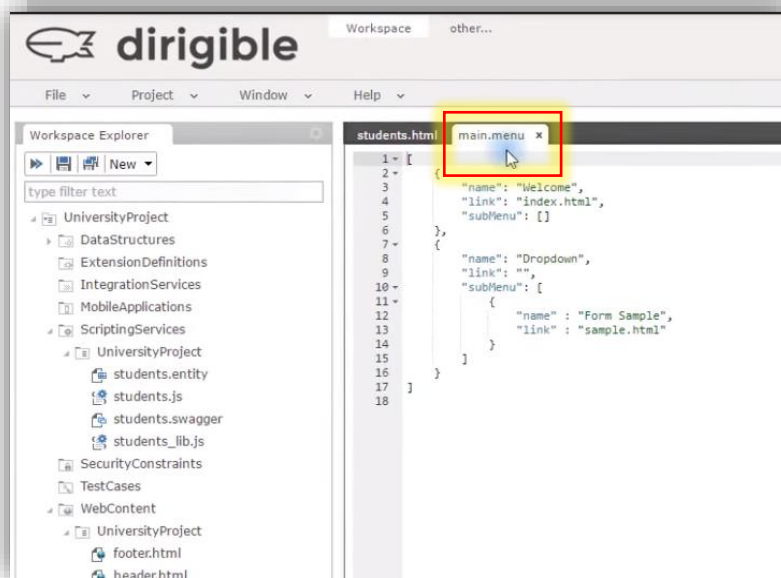

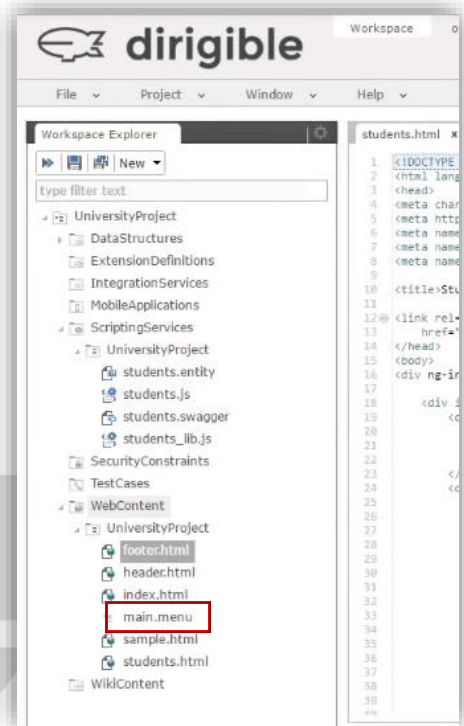

Next -> Next -> Type your Page Title and choose Finish.

8) Open the *main.menu* file in a new tab.

If you want to expand the tab window, just double-click the main.menu tab.

If you want to minimize the tab double-click the main.menu again.

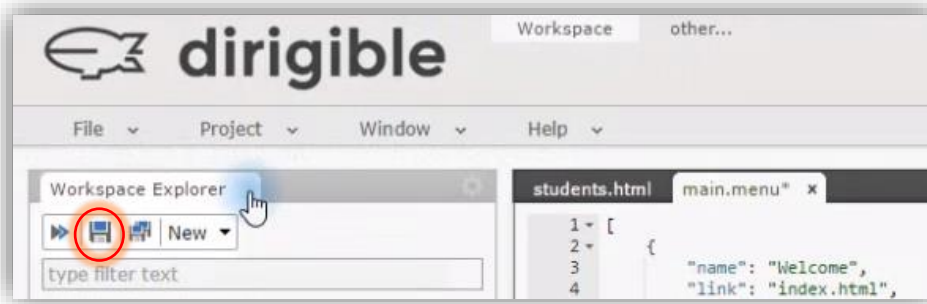

9) Add the previously generated Students page in the descriptor of the main menu.

You must delete the information for the *"subMenu"* and you must change the name.

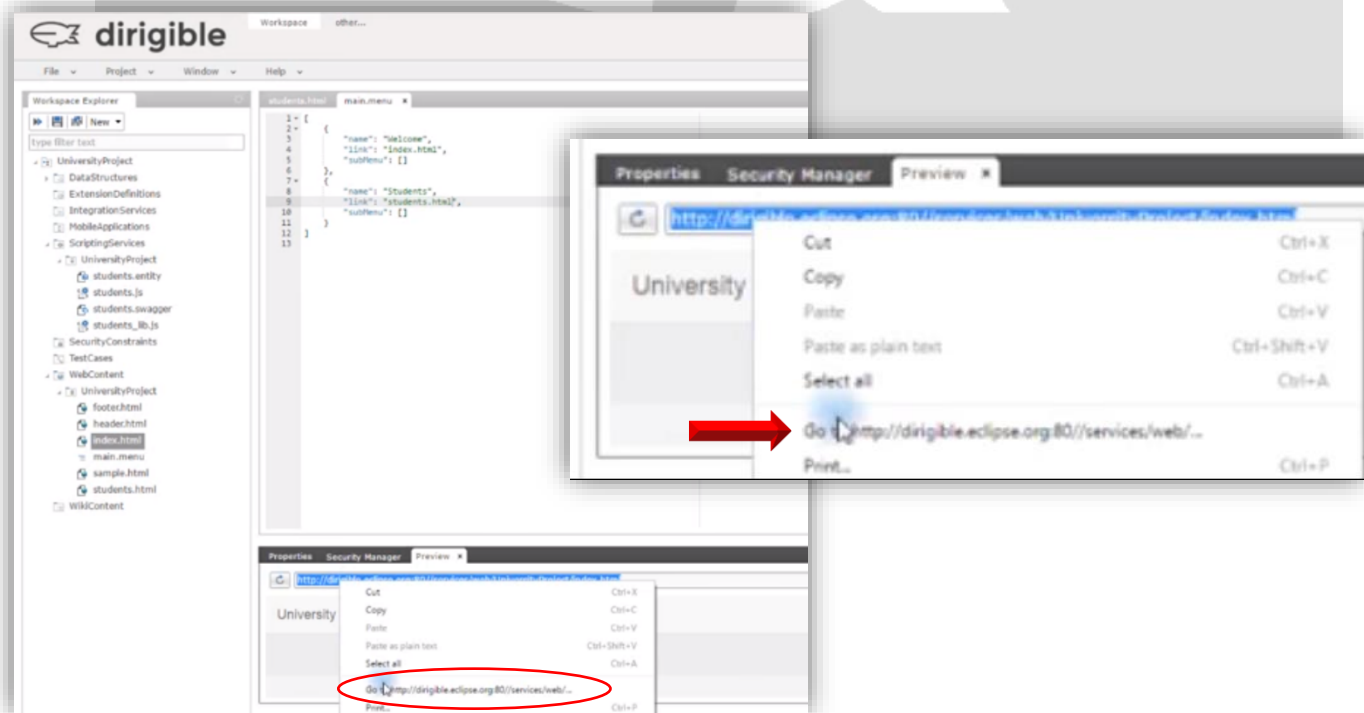

For *"link"* you must type *"students.html"*.

- 10) Save the changes you have just made by clicking on the second icon on the top of the Workspace Explorer.

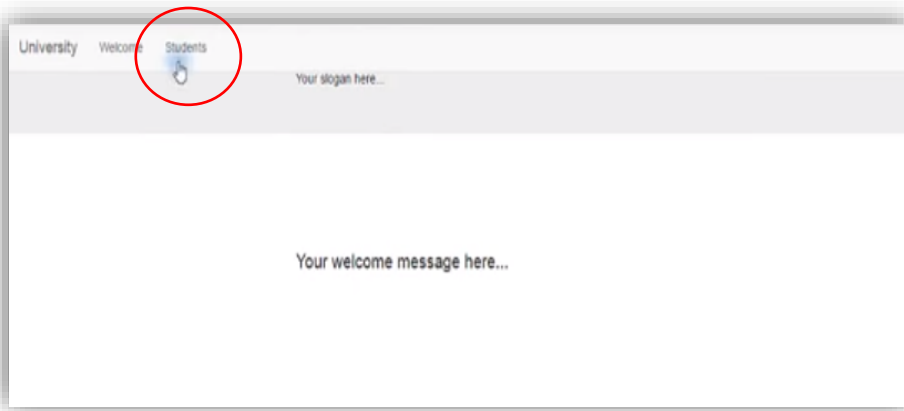

- 11) Now select the *index.html* file by choosing it from the dropdown menu of the WebContent in the Workspace Explorer.

- 12) Open the link in a separate browser tab by marking the URL address, right-click on it and choosing “Go to <http://dirigible.eclipse.org:80//services/web/.....>”

- 13) Check what the Students page looks like.
