Generating User Interface in Eclipse Dirigable

In this how-to-guide we show you how to generate and manage user interface for your project in Eclipse Dirigable.

I. Generating web page for your entity:

1. In *Workspace explorer* expand ScriptingServices folder and your project folder after that.

2. Select your entity, then from the context menu choose *Generate->User Interface for entity Service*

3. In the opened window select the List Entities template, then choose Next.

4. Select all currently available fields.

5. Type the name of your file and choose Next.

6. Type your page title and choose Finish.

Until now you have generated a web page showing a list of sudents.

II. Making an index page:

1. To create your new user interface, in *Workspace Explorer* choose WebContent and from the context menu select New->User Interface.

2. From the opened window select the Index Page option.

3. If you want to use the default name *index.html*, just choose Next.

4. Type your page title and choose Finish.

Now you learned how to create an index page.

III. Adding your index page to the main menu of your web page:

1. Open the main.menu file in a new tab.

2. If you want to expand the tab window, just double-click the main.menu tab.

3. Add the previously generated Students page in the descriptor of the main menu.

4. To minimize the tab window, double-click the main.menu tab.

5. Save the changes by clicking the "Save" icon in the Workspace Explorer.

6. Select the index.html file.

7. Open the link in a separate browser tab or double-click the Preview tab.

8. Now you can see what your Students page looks like.

In this how-to-guide you learned how to create and manage the User Interface of your project in Eclipse Dirigable!

(По тази задача работихме заедно със Стилян Камберов).
